

## Fire1

The Foundry Innovation and Research 1, Ltd. (FIRE1), was founded in 2013 and is the first European spinout of The Foundry, a highly successful medical device incubator from Menlo Park, California. The company, located in Ireland, focuses on developing a novel remote monitoring device to improve outcomes for patients suffering from an increased risk of heart failure. Early detection enables a timely intervention and adjustment of pharmacotherapy, thus avoiding hospitalisation, improving quality of life and lowering health care costs.

### When ambition meets ambition

FIRE1 is active in a market with growing unmet needs, as cardiac disease is currently the world's leading cause of death.

**Together,  
we build  
a leading  
company**

The financing provides FIRE1 with capital to further advance its novel remote monitoring solution to improve outcomes for heart failure patients.

#### Summary

<b>Activity</b>	Monitoring device used in case of risk of heart failure
<b>Entry</b>	2018
<b>Platform</b>	Health & Care
