

Laser 2000

Laser 2000, founded in 1986, is a **leading independent European supplier of innovative laser and photonics solutions**. The company's comprehensive range of products extends from lasers and light sources for the processing of materials, over measurement equipment and fibre optics to 3D imaging, optical power and energy meters as well as cameras. With more than 30 years of experience in the market, Laser 2000 is a **photonics pioneer** and can therefore benefit from long-standing customer and supplier relationships. It serves renowned companies and research institutes in the fields of automation and sensor technology, optical communications and network technologies, biotech and medicine, automotive and aerospace.

Laser 2000 has its headquarters in Weßling (Germany) and also has subsidiaries in France, Spain and Sweden.

When ambition meets ambition

Laser 2000 is active in a healthy **growing laser and photonics market**. Optical technologies keep spreading to new industrial applications. As a technology spanning over all major sectors, photonics will put its mark on the 21st century from both, a technological and economic perspective, be it in Industry 4.0, autonomous driving, diagnostics or broadband networks. Acting as an **independent intermediary between customers and a plethora of suppliers and products, we believe that Laser 2000 is ideally positioned to participate in and benefit from this development.**

Together, we build a leading company

Laser 2000 is well positioned to continue this development in the future: **the company will keep expanding both its national and international business activities in the years to come**, continuing to act as a trusted and competent partner and adviser to its clients and suppliers.

Thanks to its broad range of products and services complemented by customised systems solutions, Laser 2000 is ideally suited to meet all customer requirements in this market and, as a fact, offers its clients a **one-stop-shop solution offering laser components & systems, as well as additional services and affiliated products**. On top of that, **new emerging fields of applications for laser technology** are expected to contribute to a continuously strong growth of the photonics market.

Laser 2000 has what it takes to expand its market leadership and we look forward to helping it reaching these goals in the future. In addition, the company perfectly fits within our Smart Industries strategy that, among others, focuses on **Engineered Products**.
